# **Durham-Sedgefield Boundary Survey Exercise**

#### **Background**

Following the breakup of the United Kingdom in 2020 the boundary between the newly formed City State of Durham and the Republic of Sedgefield was provisionally defined as following the middle of the River Wear up to the northern limit of the attached 1:12,500 scale map. However, at a recent meeting between the two heads of state, the President of Sedgefield persuaded the Prince Bishop of Durham to transfer a triangular area of territory to the west of the river to Sedgefield. The justification for the transfer was that the area had historically been owned and farmed by the family of the president's wife.

Unfortunately no records remain of the boundaries of the old family estate, and the president was only able to provide a rough definition of the area in question:

- 1. From Shincliffe Bridge to Pinnock Hill
- 2. From Pinnock Hill to Buck's Hill
- 3. From Buck's Hill to Mountjoy Farm
- 4. From Mountjoy Farm to the River Wear at Maiden Castle

As your country's experts on boundary demarcation, you have been called upon to survey the area in question in preparation for demarcating the line.

#### The task

Each country has established four sub-commissions, one for each section of the boundary. The opposing sub-commissions on each side have been charged with the task of agreeing a detailed technical description of their section of the boundary, including recommendations for marking the line on the ground.

At the end of the exercise, each pair of sub-commissions will be asked to make a brief (5 minutes maximum) presentation of their recommendations. If any disputes arose during the survey, the presentation should include a description of the nature of these disputes and how they were resolved.

#### **Facts**

- Relations between the two countries are good and there is a strong desire to maintain an open border. The sub-commissions are expected to enter into the exercise in a spirit of cooperation and seek a practical and mutually-beneficial solution. Please treat the landscape as real and do not invent facts to justify your team's position!
- Land use in the vicinity of the boundary is primarily rural and recreational.
- The sewage works below Pinnock Hill and the reservoir on Buck's Hill both serve Durham City.
- The buildings at Houghall Farm and Mountjoy Farm are to remain part of Durham.

IBRU: Centre for Borders Research 20-22 September 2022

### Suggested timetable

1400-1530	Reconnaissance of boundary area; identification of preferred boundary line
1530-1630	Meeting of opposite sub-commissions*; discussion and reconciliation of differences
1545-1615	Refreshments available in Computer Sciences classroom
1630-1700	Debrief

<sup>\*</sup> Sub-commissions are responsible for arranging a mutually-convenient meeting place and time.

#### **Practical notes**

Please stick to roads and footpaths (marked in green on the attached 1:12,500 scale maps) and respect any 'no entry' signs (e.g. at Houghall Farm).

Although boundary turning points should ideally be given in geographical coordinates, grid coordinates are acceptable for turning points at which GPS readings cannot easily be taken. Ordnance Survey grid numbers are marked on the 1:50,000 scale map extract (example: Mountjoy reservoir to  $\pm 100$  metres = 279410)

Toilets and a cafeteria are available at the university's Botanic Garden.

If you need assistance during the exercise, please call Liz Buxton on +44 7810 427563. To contact local emergency services (police, fire, ambulance) dial 999 from any phone.
